

# TURNING DATA INTO ACTIONABLE INTELLIGENCE

ADVANCED FEATURES IN MISP SUPPORTING YOUR ANALYSTS AND TOOLS

CIRCL / TEAM MISP PROJECT

13TH ENISA-EC3 WORKSHOP

2024-09-11

Turning data into actionable intelligence

TURNING DATA INTO ACTIONABLE INTELLIGENCE

ADVANCED FEATURES IN MISP SUPPORTING YOUR ANALYSTS AND TOOLS

CIRCL / TEAM MISP PROJECT

13TH ENISA-EC3 WORKSHOP

# THE AIM OF THIS PRESENTATION

- Why is **contextualisation** important?
- What options do we have in MISP?
- How can we **leverage** this in the end?

2024-09-11

Turning data into actionable intelligence

└ The aim of this presentation

- Why is **contextualisation** important?
- What options do we have in MISP?
- How can we **leverage** this in the end?

- Contextualisation became more and more important as we as a community matured
  - ▶ **Growth and diversification** of our communities
  - ▶ Distinguish between information of interest and raw data
  - ▶ **False-positive** management
  - ▶ TTPs and aggregate information may be prevalent compared to raw data (risk assessment)
  - ▶ **Increased data volumes** leads to a need to be able to prioritise
- These help with filtering your TI based on your **requirements...**
- ...as highlighted by Pasquale Stirparo *Your Requirements Are Not My Requirements*

### └ The growing need to contextualise data

- Contextualisation became more and more important as we as a community matured
  - ▶ **Growth and diversification** of our communities
  - ▶ Distinguish between information of interest and raw data
  - ▶ **False-positive** management
  - ▶ TTPs and aggregate information may be prevalent compared to raw data (risk assessment)
  - ▶ **Increased data volumes** leads to a need to be able to prioritise
- These help with filtering your TI based on your **requirements...**
- ...as highlighted by Pasquale Stirparo *Your Requirements Are Not My Requirements*

- Some main objectives we want to achieve when producing data
  - ▶ Ensure that the information is **consumable** by everybody
  - ▶ That it is **useful** to the entire target audience
  - ▶ The data is **contextualised** for it to be understood by everyone
- What we ideally want from our data
  - ▶ We want to be able to **filter** data for different use-cases
  - ▶ We want to be able to get as much knowledge out of the data as possible
  - ▶ We want to know where the data is from, how it got there, why we should care

- Some main objectives we want to achieve when producing data
  - ▶ Ensure that the information is **consumable** by everybody
  - ▶ That it is **useful** to the entire target audience
  - ▶ The data is **contextualised** for it to be understood by everyone
- What we ideally want from our data
  - ▶ We want to be able to **filter** data for different use-cases
  - ▶ We want to be able to get as much knowledge out of the data as possible
  - ▶ We want to know where the data is from, how it got there, why we should care

- Context added by analysts / tools
- Data that tells a story
- Encoding analyst knowledge to automatically leverage the above

### └ Different layers of context

- Context added by analysts / tools
- Data that tells a story
- Encoding analyst knowledge to automatically leverage the above

# CONTEXT ADDED BY ANALYSTS / TOOLS

2024-09-11

Turning data into actionable intelligence

└ Context added by analysts / tools

CONTEXT ADDED BY ANALYSTS / TOOLS

- An IP address by itself is barely ever interesting
- We need to tell the recipient / machine why this is relevant
- All data in MISP has a bare minimum required context
- We differentiate between indicators and supporting data

2024-09-11

Turning data into actionable intelligence

└ Context added by analysts / tools

└ Expressing why data-points matter

- An IP address by itself is barely ever interesting
- We need to tell the recipient / machine why this is relevant
- All data in MISP has a bare minimum required context
- We differentiate between indicators and supporting data

# BROADENING THE SCOPE OF WHAT SORT OF CONTEXT WE ARE INTERESTED IN

- **Who** can receive our data? **What** can they do with it?
- **Data accuracy, source reliability**
- **Why** is this data relevant to us?
- **Who** do we think is behind it, **what tools** were used?
- What sort of **motivations** are we dealing with? Who are the **targets**?
- How can we **block/detect/remediate** the attack?
- What sort of **impact** are we dealing with?

2024-09-11

Turning data into actionable intelligence

└ Context added by analysts / tools

└ Broadening the scope of what sort of context we are interested in

BROADENING THE SCOPE OF WHAT SORT OF CONTEXT WE ARE INTERESTED IN

- Who can receive our data? What can they do with it?
- Data accuracy, source reliability
- Why is this data relevant to us?
- Who do we think is behind it, what tools were used?
- What sort of motivations are we dealing with? Who are the targets?
- How can we block/detect/remediate the attack?
- What sort of impact are we dealing with?

# TAGGING AND TAXONOMIES

- Simple labels
- Standardising on vocabularies
- Different organisational/community cultures require different nomenclatures
- Triple tag system - taxonomies
- JSON libraries that can easily be defined without our intervention

<input type="checkbox"/> Tag	Events	Attributes	Tags
<input type="checkbox"/> workflow:state="complete"	11	0	workflow:state="complete" 🔗
<input type="checkbox"/> workflow:state="draft"	0	0	workflow:state="draft" 🔗
<input type="checkbox"/> workflow:state="incomplete"	55	10	workflow:state="incomplete" 🔗
<input type="checkbox"/> workflow:state="ongoing"	0	0	workflow:state="ongoing" 🔗

2024-09-11

Turning data into actionable intelligence

└ Context added by analysts / tools

└ Tagging and taxonomies

- Simple labels
- Standardising on vocabularies
- Different organisational/community cultures require different nomenclatures
- Triple tag system - taxonomies
- JSON libraries that can easily be defined without our intervention

<input type="checkbox"/> Tag	Events	Attributes	Tags
<input type="checkbox"/> workflow:state="complete"	11	0	workflow:state="complete" 🔗
<input type="checkbox"/> workflow:state="draft"	0	0	workflow:state="draft" 🔗
<input type="checkbox"/> workflow:state="incomplete"	55	10	workflow:state="incomplete" 🔗
<input type="checkbox"/> workflow:state="ongoing"	0	0	workflow:state="ongoing" 🔗

- Taxonomy tags often **non self-explanatory**
  - ▶ Example: universal understanding of tlp:green vs APT 28
- For the latter, a single string was ill-suited
- So we needed something new in addition to taxonomies - **Galaxies**
  - ▶ Community driven **knowledge-base libraries used as tags**
  - ▶ Including descriptions, links, synonyms, meta information, etc.
  - ▶ Goal was to keep it **simple and make it reusable**
  - ▶ Internally it works the exact same way as taxonomies (stick to **JSON**)

# THE EMERGENCE OF ATT&CK AND SIMILAR GALAXIES

- Standardising on high-level **TTPs** was a solution to a long list of issues
- Adoption was rapid, tools producing ATT&CK data, familiar interface for users
- A much better take on kill-chain phases in general
- Feeds into our **filtering** and **situational awareness** needs extremely well
- Gave rise to other, ATT&CK-like systems tackling other concerns
  - ▶ **attck4fraud** <sup>1</sup> by Francesco Bigarella from ING
  - ▶ **Election guidelines** <sup>2</sup> by NIS Cooperation Group

# DATA THAT TELLS A STORY

2024-09-11

Turning data into actionable intelligence

└─ Data that tells a story

DATA THAT TELLS A STORY

- Atomic attributes were a great starting point, but lacking in many aspects
- **MISP objects**<sup>3</sup> system
  - ▶ Simple **templating** approach
  - ▶ Use templating to build more complex structures
  - ▶ Decouple it from the core, allow users to **define their own** structures
  - ▶ MISP should understand the data without knowing the templates
  - ▶ Massive caveat: **Building blocks have to be MISP attribute types**
  - ▶ Allow **relationships** to be built between objects

<sup>3</sup><https://github.com/MISP/misp-objects>

2024-09-11

# CONTINUOUS FEEDBACK LOOP

- Data shared was **frozen in time**
- All we had was a creation/modification timestamp
- Improved tooling and willingness allowed us to create a **feedback loop**
- Lead to the introduction of the **Sighting system**
- Signal the fact of an indicator sighting...
- ...as well as **when** and **where** it was sighted
- Vital component for IoC **lifecycle management**

2024-09-11

└ The various ways of encoding analyst knowledge  
to automatically leverage our TI

THE VARIOUS WAYS OF ENCODING  
ANALYST KNOWLEDGE TO AUTOMATI-  
CALLY LEVERAGE OUR TI

# FALSE POSITIVE HANDLING

- Low quality / false positive prone information being shared
- Lead to **alert-fatigue**
- Exclude organisation xy out of the community?
- FPs are often obvious - **can be encoded**
- **Warninglist system**<sup>4</sup> aims to do that
- Lists of well-known indicators which are often false-positives like RFC1918 networks, ...

## LIST OF KNOWN IPV4 PUBLIC DNS RESOLVERS

Id	89
Name	List of known IPv4 public DNS resolvers
Description	Event contains one or more public IPv4 DNS resolvers as attribute with an IDS flag set
Version	20181114
Type	string
Accepted attribute types	ip-src, ip-dst, domain/ip
Enabled	Yes (disable)
Values	
1.0.0.1	
1.1.1.1	
1.1.1.1.4	

### Warning: Potential false positives

### ■ Providing advanced ways of querying data

- ▶ Unified export APIs
- ▶ Incorporating all contextualisation options into **API filters**
- ▶ Allowing for an **on-demand** way of **excluding potential false positives**
- ▶ Allowing users to easily **build their own** export modules feed their various tools

## Turning data into actionable intelligence
