13TH ENISA-EC3 WORKSHOP

OBJECTS - OR HOW WE LEARNED TO STOP WORRYING AND LOVE THE TEMPLATES

- Attributes are a simple but powerful tool to describe data
- Lacking the capability to create containers around attributes describing a common concept
- The goal was to develop something semi-standardised, with the option to **dynamically build templates**
- We have considered a list of different solutions such as simple boolean operators, but found that the current implementation was superior.
- The result is a simple template that uses the basic attribute types as building blocks along with some meta data
- The template does **not have to be known** in order to use the constructed objects
- What we maintain now is a set of common objects, but similarly to our other JSON formats, users can extend it with their own ideas.

OBJECTS - OR HOW WE LEARNED TO STOP WORRYING AND LOVE THE TEMPLATES

- Attributes are a simple but powerful tool to describe data
- Lacking the capability to create containers around attributes describing a common concept
- The goal was to develop something semi-standardised, with the option to **dynamically build templates**
- We have considered a list of different solutions such as simple boolean operators, but found that the current implementation was superior.
- The result is a simple template that uses the basic attribute types as building blocks along with some meta data
- The template does **not have to be known** in order to use the constructed objects
- What we maintain now is a set of common objects, but similarly to our other JSON formats, users can extend it with their own ideas.

- Using a similar JSON format as the taxonomies, galaxies, warninglists.
- You can find the default set of object templates in the git repository¹.
- Some of the object templates capture objects from other standards or mimic the output of tools
- We tried to capture the most common use-cases coming from our own use-case as well as those of various partners that got involved
- Improvements or pull requests for new object templates are of course always welcome

EXISTING OBJECT EXAMPLES

- AIL-leak - **AIL object**, an example for an object catering to the output of another tool
- Android permission - **An object used to further contextualise another object**
- Bank account
- File **Generic object to describe a file**
- Passive DNS
- Regex
- Sandbox report
- Vulnerability **Enabling new use-cases such as pre-sharing of vulnerability information**
- x509
- Yara **Verbatim sharing of rule sets along with meta-data**

ADDING ELEMENTS TO AN OBJECT TEMPLATE

2024-09-11

MISP Object Template

└─ Adding elements to an object template

```
1 "regex-type": {  
2   "description": "Type of the regular expression syntax.",  
3   "disable_correlation": true,  
4   "ui-priority": 0,  
5   "misp-attribute": "text",  
6   "values_list": ["least",  
7     "PCRE",  
8     "PCRE2",  
9     "POSIX BRE",  
10    "POSIX ERE"  
11  ]  
12 },
```

```
1 "regex-type": {  
2   "description": "Type of the regular expression syntax.",  
3   "disable_correlation": true,  
4   "ui-priority": 0,  
5   "misp-attribute": "text",  
6   "values_list": [  
7     "PCRE",  
8     "PCRE2",  
9     "POSIX BRE",  
10    "POSIX ERE"  
11  ]  
12 },
```

ATTRIBUTE KEYS

- Primary key: Object relation
- description: A description of the attribute in relation to the object
- disable_correlation: You can disable correlations for attributes in the resulting object
- ui-priority: Not implemented yet, but the idea is to have a "quick view" of objects only showing certain prio levels
- misp-attribute: The misp attribute type used as as the building block
- values_list: an optional list of values from which the user **must** choose instead of entering a value manually
- sane_defaults: an optional list of values from which the user **may** choose instead of entering a value
- multiple: Allow the user to add **more** than one of this attribute

- sane_defaults: an optional list of values from which the user **may** choose instead of entering a value
- multiple: Allow the user to add **more** than one of this attribute

- The template also defines which of the added attributes are mandatory
- Requirements are pointed to via their **object relations names**
- We differentiate between two types of rule sets:
 - ▶ Required: Everything in this list has to be set in order for the object to validate
 - ▶ Required One Of: Any of the attributes in this list will satisfy the requirements

- The template also defines which of the added attributes are mandatory

- We differentiate between two types of rule sets:
 - ▶ Required: Everything in this list has to be set in order for the object to validate
 - ▶ Required One Of: Any of the attributes in this list will satisfy the requirements

WHAT WILL THE TEMPLATE ACTUALLY DO?

- Templates create a form that can be used to populate an event
- When using templates, MISP will enforce everything according to the template rules
- However, these are only optional, users can avoid using the templates when creating events via the API
- The reason for this is that you do not need to have the template in order to create an object
- The limitation of this system: You **cannot modify** objects that were created with unknown templates

Add File Object

Object Template

File v10

Description

File object describing a file with meta-information

Requirements

Required one of: filename, size-in-bytes, authentihash, ssdeep, imphash, pehash, md5, sha1, sha224, sha256, sha384, sha512, sha512/224, sha512/256, tlsh, pattern-in-file, x509-fingerprint-sha1, malware-sample

Meta category

File

Distribution

Inherit event

Comment

Save	Name :: type	Description	Category	Value
<input type="checkbox"/>	Md5 :: md5	[Insecure] MD5 hash (128 bits)	Payload delivery	
<input type="checkbox"/>	Pattern-in-file :: pattern-in-file	Pattern that can be found in the file	Payload installation	
<input type="checkbox"/>	Sha256 :: sha256	Secure Hash Algorithm 2 (256 bits)	Payload delivery	
<input type="checkbox"/>	Sha512 :: sha512	Secure Hash Algorithm 2 (512 bits)	Payload delivery
