MISP Dashboard
—MISP ZeroMQ

### MISP ZEROMQ

MISP ZEROMQ

#### MISP ZEROMQ

MISP includes a flexible publish-subscribe model to allow real-time integration of the MISP activities:

- Event publication
- Attribute creation or removal
- Sighting
- User login

 $\rightarrow$  Operates at global level in MISP

#### MISP ZEROMQ

MISP ZeroMQ functionality can be used for various model of integration or to extend MISP functionalities:

- Real-time search of indicators into a SIEM¹
- Dashboard activities
- Logging mechanisms
- Continuous indexing
- Custom software or scripting

#### MISP-Dashboard - Features

- Subscribe to multiple **ZMQ** MISP instances
- Provides historical geolocalised information
- Present an experimental **Gamification of the platform**
- Shows when and how MISP is used
- Provides real time information showing current threats and activity

### MISP-DASHBOARD: ARCHITECTURE AND DEVELOPMENT

#### SETTING UP THE DASHBOARD

- 1. Be sure to have a running redis server: e.g.
  - ► redis-server -p 6250
- 2. Update your configuration in config.cfg
- 3. Activate your virtualenv:
  - ▶ . ./DASHENV/bin/activate
- 4. Listen to the MISP feed by starting the zmq\_subscriber:
  - ► ./zmq\_subscriber.py
- 5. Start the dispatcher to process received messages:
  - ► ./zmg dispatcher.py
- 6. Start the Flask server:
  - ► ./server.py
- 7. Access the interface at http://localhost:8001/

MISP Dashboard

MISP-Dashboard: Architecture and development

Setting up the dashboard

ana a rupping radic copuse of

redis-server -p 6250 tate your configuration in config.cfg

3. Activate your virtualenv:

Listen to the MISP feed by starting the zmq\_subscriber.py

5. Start the dispatcher to process received me

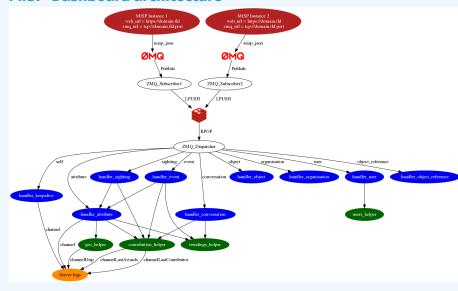

./zmq\_dispatcher.py
 Start the Flask server:

► ./server.py

ccess the interface at

the interface at http://totath

#### WRITING YOUR HANDLER

```
1 # Register your handler
2 dico_action = {
                                        handler_dispatcher,
          "misp_json":
          "misp_json_event":
                                        handler_event,
          "misp json self":
                                        handler keepalive,
          "misp json attribute":
                                        handler attribute,
          "misp json object":
                                        handler object,
          "misp json sighting":
                                        YOUR CUSTOM SIGHTINGS HANDLER,
          "misp json organisation":
                                        handler log,
          "misp json user":
                                        handler user,
          "misp json conversation":
                                        handler conversation,
          "misp json object reference": handler log,
```

MISP Dashboard

MISP-Dashboard: Architecture and development

Writing your handler

Computer your basiles

```
1 # Implement your handler
3 # e.g. user handler
4 def handler user(zmg name, jsondata):
      # json action performed by the user
     action = jsondata['action']
      # user json data
      json user = jsondata['User']
      # organisation json data
      json org = jsondata['Organisation']
      # organisation name
      org = json_org['name']
      # only consider user login
     if action == 'login':
          timestamp = time.time()
          # users_helper is a class to interact with the DB
         users_helper.add_user_login(timestamp, org)
```

#### RECENT CHANGES IN THE MISP-DASHBOARD

- MISP authentication can now be used in the misp-dashboard
- Improved TLS/SSL support in the default misp-dashboard
- Self-test tool to debug and test ZMQ connectivity

MISP Dashboard

MISP-Dashboard: Architecture and development

Recent changes in the misp-dashboard

B MSP sufferification can now be used in the misp-deshboard

In proposed TLLYSS, support in the default misp-desbboard

S Self-test tool to debug and test ZMQ connectivity

#### FUTURE DEVELOPMENT

Optimizing contribution scoring and model to encourage sharing and contributions enrichment

Increasing geolocation coverage

Global filtering capabilities

- Geolocation: Showing wanted attribute or only on specific region
  - Trendings: Showing only specified taxonomies

Tighter integration with MISP

- Present in MISP by default
- ACL enabled version

MISP Dashboard

MISP-Dashboard: Architecture and development

Future development

Optimizing contribution soring and model to burge sharing and contributions enrichment Increasing spelocation coverage (lobal filtering capabilities - Geolocation Showing wanted attribute or only on specific - "spel

#### CONCLUSION

MISP-Dashboard can provides realtime information to support security teams, CSIRTs or SOC showing current threats and activity by providing:

- Historical geolocalised information
- Geospatial information from specific regions
- The most active events, categories, tags, attributes, ...

It also propose a prototype of gamification of the platform providing incentive to share and contribute to the community MISP Dashboard -MISP-Dashboard: Architecture and development -Conclusion

MISP-Dashboard can provides realtime information to suppor

- # Historical geolocalised informatio ■ Geospatial information from specific regions
- # The most active events, categories, tags, attributes,
